The Intelligent Choice

SR spreader end

www.smartrigging.com • info@smartrigging.com

This central pin light weight solution can be engineered and produced from SR 3 (dash-8) to SR 500 (dash-1000).

The central pin is engineered and made in grade 5 Titanium for the lightest and most rigid solution.

We engineered a Smart fit winding thimble, this ensures the smallest possible spreader end. Due to the individual casted end terminals we can produce a very light and low windage spreader end solution.
